

Natural Resources

Zephyr provides a wide range of Natural Resources services to a variety of public and private clients. Our staff has expertise in the fields of ecology and regulatory permitting, and has extensive experience in conducting field investigations, monitoring, and document preparation that complies with the National Environmental Policy Act (NEPA), the Clean Water Act (CWA), and the Endangered Species Act (ESA). We are capable of evaluating the needs of our clients and providing innovative and cost-effective solutions that enable them to reach their planning and permitting goals.

Zephyr has experience with a variety of project types, from basic scientific research on populations and ecological interactions, to habitat studies and environmental impact assessments for an array of permitting and regulatory requirements including:

- Wetlands Determination and Waters of the U.S. Permitting – Section 404 of the CWA
- Wetland Mitigation/Creation/Restoration
- Threatened or Endangered Species and Habitat Assessments/Surveys – ESA
- Fatal Flaw / Environmental Constraints Analyses
- Environmental Document Preparation (NEPA, FERC, TxDOT, RUD)
- GIS Mapping and Database Management
- Liaison with United States Army Corp of Engineers (USACE)

With services that focus on wetlands, vegetation, wildlife, and other resources, our expert team delivers inventive, integrated natural resources planning and compliance services that result in successful, sustainable projects.

Assisting clients worldwide with their EHS consulting, training, and data systems needs.
