

Zephyr Environmental Corporation is a full service environmental, health, and safety (EHS) firm offering consulting, training, and data systems expertise to clients worldwide. Working within multiple industries, we specialize in air and water quality, waste management and cleanup issues, incident management, and workplace and community safety. We have a history of quickly and successfully negotiating solutions to our clients' EHS issues, and clients value our absolute commitment to comprehensive, responsive, high-quality service. We're proud of our reputation for developing practical solutions to complex challenges in a cost-effective, timely and reliable manner.

CONSULTING

Zephyr offers the full range of EHS compliance, permitting, and support services including:

- Air quality
- Environmental, health, & safety management
- Expert testimony and litigation support
- Hydrogeology and groundwater monitoring
- Incident management
- Natural resources
- Regulatory review
- Risk management
- Site characterization & corrective action
- Waste management
- Water quality

Zephyr offers clients our team's decades of experience managing EHS issues as consultants, industry staff, and regulators. Included on our staff are chemical, civil, environmental, industrial, and mechanical engineers; health and safety professionals; geologists and hydrogeologists; meteorologists; and environmental scientists. Many of our staff members previously worked in industry and offer a unique understanding of our clients' operational needs and challenges.

TRAINING

Since 1994, Zephyr Training Services and the HazMat Academy (Zephyr's specialized institute for hazardous materials safety) have provided HazMat, emergency response, environmental, and safety training to over 11,000 students. Our training foundation is a combination of technically accurate content, high-quality professional course materials, and excellent instruction and delivery. We offer instructors with strong technical backgrounds and practical experience who are also dynamic, informative, entertaining, and focused on the needs of the students.

DATA SYSTEMS

Zephyr created its data systems services in response to our clients' requests for easy to use tools that simplify and automate EHS data input, manipulation, and reporting. Each data system we develop is designed to meet a client's specific list of requirements, and is most often designed to track, store, and report data both for proof of regulatory compliance and for internal tracking purposes. While Zephyr has successfully built many systems from top to bottom, we also have successfully integrated pre-existing systems at client facilities in order to meet new data management needs.

In addition to our team's wealth of U.S.-based experience, our project work has led our team to many different industries and countries around the world including South and Central America and the Middle East. Our professionals have a proven track record of working well with other cultures and governments.

Assisting clients worldwide with their EHS consulting, training, and data systems needs.
